

Participant Information Sheet

Evaluating the Effectiveness of Euler's Golden Pie (EGP) on Learning and Memory Retention

Educational Intervention Research Study

Principal Investigator

Siddharth Sureshh

Student Researcher - High School Student

Plano, Texas, United States

Email: eulergoldpi@gmail.com

Thank you for considering participation in this educational research study.

Please read this Participant Information Sheet carefully before deciding whether you would like to participate.

This document explains the purpose of the study, what participation involves, any benefits, how your information will be handled, and your rights as a participant.

Participation in this study is completely voluntary.

Introduction

You are invited to participate in an educational research study investigating the effectiveness of a learning system known as **Euler's Golden Pie (EGP)**. This study aims to evaluate whether the learning activities provided through EGP improve participants' memory retention and learning performance following a structured educational intervention.

Before deciding whether to participate, please read this information carefully. If anything is unclear, you are encouraged to ask questions before providing your consent.

Purpose of the Study

The purpose of this study is to evaluate the effectiveness of **Euler's Golden Pie (EGP)**, an educational learning system designed to support memory retention through structured learning activities. Specifically, this study aims to examine whether participation in the EGP intervention improves participants' ability to learn and recall information when compared with their performance before the intervention.

The findings from this study will contribute to research on learning strategies and memory retention and may help guide future improvements to educational tools and instructional methods.

Why Have I Been Invited?

You have been invited to participate because you meet the eligibility criteria for this study. Participants are being recruited from the local community and include students and adults who are interested in taking part in an educational research activity.

Participation is entirely voluntary, and choosing not to participate will not affect any current or future relationship with the researcher or the hosting organization.

Note: If you are under 18 years of age, a parent or legal guardian must provide consent before you may participate in this study.

What Does Participation Involve?

If you decide to participate, you will be asked to complete the following activities during a single study session:

1. Complete a short pre-intervention assessment.
2. Participate in the EGP educational learning activity.
3. Complete a post-intervention assessment.
4. Complete a brief feedback questionnaire about your experience.

What Information Will Be Collected?

To evaluate the effectiveness of the educational intervention, the researcher will collect information related to participants' performance and experiences during the study.

This information may include:

- Basic demographic information (such as age group and participant category)
- Contact information (such as name and email address) for registration and study administration
- Pre-intervention assessment scores
- Post-intervention assessment scores
- Responses to the post-study feedback questionnaire
- Attendance and participation records

Each participant will be assigned a unique **Participant ID**. Whenever possible, research data will be analyzed and stored using this Participant ID rather than the participant's name. Contact information will be maintained separately from research data and will only be used for study administration purposes..

Confidentiality and Privacy

Your privacy is important to us.

Reasonable steps will be taken to protect the confidentiality of the information collected during this study. Personal identifying information, such as your name and email address, will be stored separately from research data whenever practical.

Research records and study data will be accessible only to the researcher and will be used solely for the purposes described in this Participant Information Sheet.

When the findings from this study are presented or published, results will be reported in summary form. Individual participants will not be identified by name without their separate permission.

Time Commitment

Participation in this study requires approximately **2 hours** to complete. Participants will complete all study activities during a single session, including registration, the pre-intervention assessment, the educational intervention, the post-intervention assessment, and the feedback questionnaire. **We kindly request that the participants make themselves available for the two consecutive weekends.**

Potential Benefits

While individual benefits cannot be guaranteed, participants may:

- Learn and practice evidence-based memory strategies.
- Experience an interactive educational learning activity.
- Gain insight into their own learning and memory performance.
- Contribute to educational research that may help improve future learning tools and instructional methods.

Voluntary Participation and Right to Withdraw

Participation in this study is entirely voluntary.

You are free to decide whether or not to participate. If you choose to participate, you may withdraw from the study at any time before submitting your final responses without providing a reason and without penalty.

Choosing not to participate or withdrawing from the study will not affect any current or future relationship with the researcher or any hosting organization.

Use of Research Data

The information collected during this study will be used solely for educational and research purposes.

The findings may be included in:

- Academic research papers
- Science fair competitions
- Educational presentations
- Conference presentations
- Educational publications
- Future improvements to the Euler's Golden Pie (EGP) learning system

Whenever research findings are shared, results will be presented in summary form. Individual participants will not be identified by name or other personally identifying information without their separate permission.

Photography and Video Recording

Photographs or video recordings may be taken during study sessions for documentation, educational presentations, promotional materials related to the study, or future research presentations.

Participation in photography or video recording is **completely optional** and is **not required** to participate in this study.

Participants will be given the opportunity to separately indicate whether they consent to being photographed or recorded. Declining photography or video recording will not affect participation in the study.

Compensation

Participants **will not receive financial compensation** for participating in this study.

Refreshments, snacks, certificates of participation, or other non-monetary appreciation items may be provided at the discretion of the researcher. These items are offered as a token of appreciation and are not intended to influence a participant's decision to participate.
